I am Full Stack Web Developer, what is that? I am able to create software to meet business needs. This work is about innovating, being flexible with ideas and in a creative way, either by the Back-end or the Front-end, resolve problems.

Full Stack Web Developer

Studies

2014-2016

Bachillerato - athénée royal charles rogier liège 1

2017-2019

Grado superior DAM (Desarrollo de Aplicaciones Multiplataformas) - Académia Optima

september 2019 - february 2020

Bootcamp Full Stack Web Developer - CodeHouse

march 2020 - Currently

Full stack developer at Livelink Motor

Skills

JavaScript

VanillaJS since 2017

Why VanillaJS is my first skill?:

Node and React are such a powerfull development enviroment and js librarie respectively but once react can't do something, you need to display your VanillaJS knowledge. It's compulsory to know it and I don't know if my reader is the "it-guy" or just a psychologist

NodeJS

APIs, Lambdas and information!

Not searching just to list Libraries without sense:

I will say I know how to develop express servers. I have worked with AWS creating lambdas. With and without TypeScript. As far as I know, I am able to develop a whole api for a full stack project and display it.

Do I need to list libraries?

I guess I don't. just look for it, read the documentation and use it.

React

Puzzles and Color

This is my big boy: Obviusly, I need a librarie? I use it! dot.

Do I need to use maps? @react-google-maps/api with type and hooks.

CSS frameworks? I like @material-ui. Harder than bootstrap but comfortable.

High knowledge in react-google-maps/api and amchart4

Obviusly hooks. maybe you are looking for Redux, yes, I have worked with it.

However there are also native proposals of react that imitate its operation.

Experience

Solbyte

FP practices under Miguel Cano Supervision - 2 months

Full Stack work creating management modules for company workers using PHP, JQuery and MySQL. Worked and implemented more features to an existing project, from the management of the company's information material to a credential creation and management system.

Coworkingame

Migration Project + MVP - 2 months

MVP creation from 0 using a real project as a reference.

- Unification of the code and establishment of future work patterns
- Reestablishment of the database with a common creation pattern for the tables
- Change PHP for NodeJS
- Change JQuery for React

Livellink motor

FullStack web developer - 10 months

I have developed an app called helpDesk (what does it mean?).

- I did a migration from the old app my crecesor did to react hooks with typescript
- developed style providers and all the pages
- Tables? multiple filters? ways to order? custom forms? yes to all
- really cool stuff with google maps and amchart4. I can customize really well everything I am able to understand
- Lambdas for our new modules? obviously yes! it was hard at the beginning, but not imposible.

Own Projects

Still in production...

I have done TFG web pages.

Sold simple SSR pages for little business

and done "complex" apis about Warriors and fights just for fun I am preparing online courses and trying to make useful posts on linkedIn

Lasts words...

I am not actually a genius, I've just always loved what I do. I trust myself but I used to need advice or help with "how to". Less than a year of real experience? true. But I'm really good at doing what I do.
thanks for reading.
